Nimbus Workspace User Guide

1. Getting started

Welcome to Nimbus Workspace, a shared workspace for documents, tasks and team chat. This guide explains how to sign in, keep your account secure, manage billing and change your account settings.

To create an account, open nimbus.example.com and click Sign up. Enter your name, your work email address and a password. We send a confirmation email; click the link in it to activate your account.

2. Logging in

To log in, open the login page, enter your email address and password, and click Log in. If two-factor authentication is turned on, you are then asked for a six-digit code from your authenticator app or SMS.

Troubleshooting login issues: if you see the message "Incorrect email or password", check for typing mistakes and make sure Caps Lock is off. If the page keeps returning to the login screen after you log in, your browser is probably blocking cookies. Allow cookies for nimbus.example.com and try again.

After five failed login attempts the account is locked for 15 minutes. This protects you from people trying to guess your password. You can wait, or unlock the account at once by resetting your password.

Single sign-on (SSO) users on the Business plan should click "Log in with SSO" instead of entering a password. If SSO fails, ask your company administrator to check that your account is assigned to the app.

3. Resetting your password

If you forgot your password, click "Forgot password?" on the login page and enter your email address. A password reset link is sent to you and stays valid for 30 minutes. For security, the link can be used once.

Choose a new password that is at least 12 characters long, with at least one number and one symbol. Your last five passwords cannot be reused. After the reset, all other devices are signed out.

If the reset email does not arrive within five minutes, look in your spam folder. Company email systems sometimes hold messages from new senders, so your IT team may need to allow no-reply@nimbus.example.com.

4. Billing and subscriptions

Three plans are available: Free, Pro and Business. You can switch plans at any time under Account Settings > Billing. When you upgrade, you pay only the difference for the rest of the current billing period.

Invoices are emailed to the billing contact at the start of each period and can also be downloaded as PDF files from the Billing page. To change the billing contact or add a VAT number, click Edit billing details.

If a payment fails, we retry it three times over seven days and email you each time. If all retries fail, the workspace moves to the Free plan, but no data is deleted. Update your card to restore your plan.

Yearly plans can be refunded in full within 14 days of purchase. To cancel a subscription, click Cancel plan on the Billing page. You keep access to paid features until the end of the period you paid for.

5. Account settings

The Account Settings page has five tabs: Profile, Security, Billing, Preferences and Privacy.

Profile: change your name, photo and email address. A new email address must be confirmed before it is used for logging in. Security: turn on two-factor authentication, view active sessions and sign out of other devices.

Preferences: choose the interface language, your time zone and which notifications you receive by email. Changes are saved automatically.

Privacy: download a copy of your data or delete your account. Deleted accounts are kept for 30 days and can be restored by contacting support during that time. After 30 days, all data is permanently removed.

6. Contacting support

Free plan users can ask questions in the community forum. Pro users can email support@nimbus.example.com and receive an answer within two business days. Business users also get priority phone support.

When you contact support, include your account email address, a short description of the problem and, if possible, a screenshot. Never send us your password; our team will never ask for it.
